01 • • Summary

04 • • Goal Achieved

02 • • Project  
Dashboard Stats

05 • • Additional  
Achievements

03 • • Demo

06 • • Learning &  
Challenges Faced

## SUMMARY

Code Analyzer is a platform where the analysis of the overall code is provided. It takes the insights from the existing version control systems and integrates with Github and JIRA, providing the analyses of metrics such as overall repositories count, total contributors in a repository, LOC refactored, and number of commits, and pull requests done by the user, and the file modifications performed.

# Code Analyzer

Course - CSCI 5308 Advance Software  
Development Concepts

Instructor - Professor Dr. Tushar Sharma

TA - Ruchi Shinde

Group - 4

**DALHOUSIE  
UNIVERSITY**

FACULTY OF  
COMPUTER SCIENCE

# Our goals

GOAL	STATUS
LOGIN	COMPLETED
DASHBOARD	COMPLETED
REPOSITORY	COMPLETED
COMMITTS	COMPLETED
PULL REQUEST	COMPLETED
FILE MODIFICATION	COMPLETED
CI/CD	COMPLETED

# Additional Achievements

Dashboard Integration  
across whole  
repository

Designate JAVA  
integration

# Learnings

**Refactoring**

**TDD**

**CI/CD**

**SonarQube**

**Third Party  
API  
Integration**

**Agile**

# Challenges

## Github:

1. Github API rate limit exceed and IPs blocked
2. Took time to understand third party API - Github API
3. Github API Graphql - took time to understand graphql

## Jira:

1. JIRA api issues
2. Understanding jira api takes time because the documentation was difficult to understand.

## Integration:

1. Integrating Github and Jira api was difficult.

# Thanks!
